

Day-to-day Administration: How do I migrate the cmd config to a new install?

Requirements

- The existing and new installation must run the same major version of Bright Cluster Manager.
- These instructions will work for Bright 7.3 and 8.X.

Steps

Export the existing cmd configuration:

```
# service cmd stop; cmd -x /tmp/current-config.xml
```

Import the configs to the new installation:

```
# service cmd stop; cmd -i /tmp/current-config.xml; service cmd start
```

<https://kb.brightcomputing.com/faq/index.php?action=artikel&cat=17&id=437>

explains how users can be migrated.
