

Security: How do I change the cipher list CMDaemon negotiates with clients?

Can I change the cipher list that CMDaemon will negotiate with clients?

Yes, this is possible in Bright 6.x with a CMDaemon revision ≥ 17802 .

To set the cipher list, the following AdvancedConfig option should be placed in `/cm/local/apps/cmd/etc/cmd.conf`:

```
AdvancedConfig = { "CipherList=HIGH" }
```

Note that if an AdvancedConfig section already exists in the `cmd.conf`, the CipherList option should be merged into the existing AdvancedConfig section (using commas as separation characters).

For more information about what ciphers are included in a given cipher list, use for example the following command:

```
openssl ciphers -v HIGH:SHA  
Unique solution ID: #1146  
Author: Martijn de Vries  
Last update: 2014-08-08 07:48
```
