

# Cluster Monitoring: How do I enable monitoring for the Intel Arria 10 GX FPGA?

How do I enable monitoring for the Intel Arria 10 GX FPGA for Bright Cluster Manager?

## Installation

### Installing Intel Acceleration Stack

The Intel Acceleration Stack Runtime package needs to be installed on the nodes that have the Programmable Acceleration Card (PAC) installed, since it includes required drivers and tools.

The package can be downloaded from: [https://www.intel.com/content/www/us/en/programmable/products/boards\\_and\\_kits/dev-kits/altera/acceleration-card-arria-10-gx/getting-started.html](https://www.intel.com/content/www/us/en/programmable/products/boards_and_kits/dev-kits/altera/acceleration-card-arria-10-gx/getting-started.html) (Requires registration)

Chroot inside the image that the nodes with Intel PACs will use:

```
# chroot /cm/images/<image-name>
```

Extract the files:

```
# tar xvf *pv_rte_installer.tar.gz
```

Run setup.sh as root. Make sure network access is available. The installer will try to install some dependencies from EPEL.

```
# setup.sh
```

Everything should be set up automatically. By default, files are installed into `/${HOME}/intelrtestack`. To be able to use `fpga*` commands you'll need to update your environment by sourcing the init file:

```
# source ${HOME}/intelrtestack/init_env.sh
```

## Validating Installation

### Checking Drivers

Drivers are compiled for your kernel by [DKMS](#) during boot. To check the current status run:

(c) 2019 Bright Computing <kb@brightcomputing.com> | 2019-12-09 19:29

URL: <https://kb.brightcomputing.com/faq/index.php?action=artikel&cat=16&id=475&artlang=en>

# Cluster Monitoring: How do I enable monitoring for the Intel Arria 10 GX FPGA?

```
# dkms status
```

```
intel-fpga, 1.1.2-1, 3.10.0-862.2.3.el7.x86_64, x86_64: installed
```

It is also a good idea to check if the kernel modules are loaded:

```
# lsmod | grep -e intel_fpga -e spi -e altera -e avmmi
```

## Getting some basic information

Simply run:

```
# fpgainfo port
```

Example output:

```
Board Management Controller, microcontroller FW version 26889
```

```
Last Power Down Cause: POK_CORE
```

```
Last Reset Cause: None
```

```
//***** PORT *****//
```

```
Object Id : 0xEC00000
```

```
PCIe s:b:d:f : 0000:5E:00:0
```

```
Device Id : 0x09C4
```

```
Socket Id : 0x00
```

```
Ports Num : 01
```

```
Bitstream Id : 0x123000200000185
```

# Cluster Monitoring: How do I enable monitoring for the Intel Arria 10 GX FPGA?

Bitstream Version : 0x555500030201

Pr Interface Id : 69528db6-eb31-577a-8c36-68f9faa081f6

Accelerator Id : 35f9452b-25c2-434c-93d5-6f8c60db361c

## Running a simple "Hello World" application

Go to the "hello\_afu" directory:

```
# cd $OPAE_PLATFORM_ROOT/hw/samples/hello_afu
```

The compiled bitstream file can be found under the 'bin' directory. To load it to your FPGA:

```
# fpgaconf bin/hello_afu.gbs
```

This should return no output if everything went fine.

Compile the software:

```
# cd sw
```

```
# make
```

Run the application:

```
# ./hello_afu
```

## Running Test

AFU DFH REG = 1000010000000000

AFU ID LO = 9722d43375b61c66

AFU ID HI = 850adcc26ceb4b22

AFU NEXT = 00000000

AFU RESERVED = 00000000

# Cluster Monitoring: How do I enable monitoring for the Intel Arria 10 GX FPGA?

Reading Scratch Register (Byte Offset=00000080) = 00000000

MMIO Write to Scratch Register (Byte Offset=00000080) = 123456789abcdef

Reading Scratch Register (Byte Offset=00000080) = 123456789abcdef

Setting Scratch Register (Byte Offset=00000080) = 00000000

Reading Scratch Register (Byte Offset=00000080) = 00000000

This example application writes "123456789abcdef" to a register and reads it back.

## Running with Bright Cluster Manager

Bright Cluster Manager software does not interfere with the operation of the Intel Programmable Accelerator Card (PAC) itself. Also no additional steps are required for compatibility. Customers can monitor their Intel PAC using Bright Cluster Manager tools.

For 8.2 it is recommended to have a separate category for the nodes with an Intel PAC, and to enable additional monitoring on those nodes only.

### Example

Add a category:

```
# cmsh
```

```
category add intel_pac
```

```
set softwareimage <softwareimage_with_intel_pac_drivers_installed>
```

```
commit
```

Enable metric collection for category:

```
# cmsh
```

# Cluster Monitoring: How do I enable monitoring for the Intel Arria 10 GX FPGA?

monitoring setup

```
add collection intel_pac
```

```
set consolidator default
```

```
set script /cm/local/apps/cmd/scripts/metrics/sample_fpga_intel.py
```

```
nodeexecutionfilters
```

```
add category intel_pac
```

```
commit
```

Add nodes to category:

```
# cmsh
```

```
device use <device_name>
```

```
set category intel_pac
```

```
commit
```

And monitoring should start on the nodes.
